

DUSSEHRA HOLIDAY AI PROJECT CHALLENGE - CLASS 9

AI Explorer Challenge | 10-Day Creative & Practical Holiday Work

Learn • Explore • Create • Test • Improve

Choose an ONE project. These projects are limited to Units 1, 2, and 5

1. AI Detective - Find AI Around You

Idea: Find 10 real-life examples of AI in everyday life.

What to do:

- Identify where AI is used in each example.
- Think about what data it may use and what prediction or decision it makes.
- Mention one benefit and, where relevant, one possible concern.

Final output: A colorful AI Around Me poster, digital presentation, or display board with 10 examples.

Syllabus units: Unit 1 + Unit 2

2. Solve a Real Problem Using the AI Project Cycle

Idea: Choose a real problem at home, school or in the community that could potentially be addressed using AI.

What to do:

- Identify the problem and people affected.
- Decide what data might be needed.
- Suggest a possible AI-based solution.
- Think about benefits and ethical concerns.

Final output: A one-page AI Project Canvas: Problem → People → Data → AI Solution → Ethics.

Syllabus units: Unit 1 + Unit 2

3. My Data Tells a Story

Idea: Collect simple personal or household data for 5–7 days and discover what it says.

What to do:

- Choose a safe topic such as study time, screen time, water use, sleep, books, read or household waste.
- Organize the data in a table.
- Create 2–3 graphs.
- Write three observations and one conclusion.

Final output: A small Data Story containing the data table, graphs and findings.

Syllabus units: Unit 2

4. Design Your Own Generative AI

Idea: Imagine an AI that can create something new: stories, posters, cartoons, songs, clothes, houses, or imaginary worlds.

What to do:

- Choose what your Generative AI creates.
- Create 3–5 examples using suitable prompts or tools.
- Compare how changing the prompt changes the output.
- Mention one responsible-use or ethical concern.

Final output: A Generative AI showcase with prompts and 3–5 outputs.

Syllabus units: Unit 5

5. AI or NOT AI? — The Great Image Challenge

Idea: Create a quiz that challenges people to identify real and AI-generated images.

What to do:

- Collect or create around 10–15 suitable images.
- Mix real and AI-generated examples.
- Ask people to guess which AI-generated.
- Explain the clues that helped you make your judgement.

Final output: A 10–15 image AI-or-Real quiz with answers and observations.

Syllabus units: Unit 2 + Unit 5

Suggested 10-Day Work Plan

Days	Work
Days 1–2	Choose the project, understand the challenge, and make a simple plan.
Days 3–5	Collect data / create content / build the first version.
Days 6–7	Test the project and record mistakes or interesting results.
Days 8–9	Improve the project and prepare the final presentation/demo.
Day 10	Final check: Can you explain what you made, how it works, and what you learned?

★ What You Should Submit

- Completed project / working prototype / poster / digital output.
- A short explanation of what they did and what they discovered.
- Evidence of testing: examples, screenshots, graphs, results, or observations.
- Students should be able to explain their own work. Copying a ready-made project is discouraged.

Simple Evaluation — 20 Marks

Criteria	Marks
Understanding & explanation	5
Creativity / originality	5
Working / completed project	5
Testing, observations & presentation	5

Goal: Don't just study AI — experience it!
